This time it was the company Logitech that made a chargeable touchpad for use only on the Mac Operating system.. Most of these are aimed at PC users but as the Mac user base grows, so does the market for non-Apple accessories.. Logitech T651 Trackpad for Mac Highlights • Bluetooth Wireless • Up to 30' Range • Multi-touch Gestures • Integrated Mechanical Click • Ergonomic Tilt Angle • Recharges via USB • Power Management Unlike the T650, the T651 relies on Bluetooth technology to make the connection.. In the packaging, next to the device, you get a USB cable that is meant for charging the built in battery (type A connector on the Micro type B), as well as printed documentation.. 6 8 or later, which competes directly with Apple's own Magic Trackpad OS X has supported gestures for a while and leveraging them can really enhance the user experience.. Something we've found troublesome on Windows which is probably one of the reasons why Logitech decided to use the

unifying dongle receiver instead which also has the benefit of making it easier to use multiple Logitech devices together.
